STATE ESTIMATES
OF
FARM INCOME, 1949-60

The tables in this report contain estimates of gross farm income, production expenses, and net farm income for each State back to 1949. Estimates for Alaska and Hawaii are not included in any of the U. S. or regional totals.

Revised annual estimates of cash receipts and the value of home consumption are given by States for 1959 and 1960. In addition, revised cash receipts from farm marketings by commodity groups and individual commodities are shown for the same years.

For the years, 1958-60, revisions in U. S. farm income estimates, published in the July 1961 issue of The Farm Income Situation (FIS-183), have been carried through on a State basis in this supplement. Revisions are based on more complete current information as well as some new information provided by the 1959 Census of Agriculture. For livestock and livestock products and some fruits the new data are available, and have been incorporated in gross farm income estimates. Revisions for gross income from most crops are yet to be made. For certain production expenses, revisions for 1958-60 have been made on the basis of changes occurring between the 1954 and the 1959 Censuses of Agriculture. However, because of the necessity of integrating farm accounts into national income totals, the items in production expenses are still tied to the previously published 1957 levels.

Revised income and expense estimates do not extend as yet back to 1955; thus estimates for some earlier years are not strictly comparable with the revised estimates for 1958-60. But the discrepancies are probably relatively small.

New definitions adopted in the 1959 Census of Agriculture together with the long-run decline in farms have reduced the number of farms in 1959 by about 20 percent from the number in 1954, according to preliminary results of the Census. Various comprehensive analyses and appraisals are yet to be made of these results and final estimates of the number of farms will be available later this year. Hence previously published tables on realized gross income, realized net income, and total net income per farm by States are omitted from this issue. A revised series of per farm income will be made available as soon as possible after official USDA estimates of farm numbers by States are available.
